Sequence 548, Application US/09134001C

Patent No. 6380370

GENERAL INFORMATION:

APPLICANT: LYND DOUGETE-Stamm et al

TITLE OF INVENTION: BEIDERMIDIS FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: DEPLEMBLY FOR DIAGNOSTICS AND THERAPEUTICS

CURRENT APPLICATION NUMBER: US/09/134,001C

PRIOR REPLING DATE: 1998-08-13

PRIOR PELING DATE: 1997-11-08

PRIOR PELING DATE: 1997-11-08

PRIOR FILING DATE: 1997-11-08

PRIOR FILING DATE: 1997-11-08

Patent No. 6380370

GENERAL INFORMATION:

APPLICANT: Lynn Doucette-Stamm et al

TITLE OF INVENTION: BEIDERMIDIS FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: BEIDERMIDIS FOR DIAGNOSTICS AND THERAPEUTICS

CURRENT APPLICATION NUMBER: US/09/134,001C

FILE REFERENCE: 1990-08-13

PRIOR FILING DATE: 1990-08-13

PRIOR FILING DATE: 1997-11-08

PRIOR FILING DATE: 1997-10-08

PRIOR FILING DATE: 1997-10-08

Betait No. US2002008220641

GENERAL INFORMATION

APPLICANT: Leach, Martin D.

APPLICANT: Mehraban, Fuad,

APPLICANT: Colley, Pamela

APPLICANT: Colley, Pamela

APPLICANT: Topper, James

TITLE OF INVENTION: No. US20020082206A1e1 Polynuclectides from Atherogenic Cells

TITLE OF INVENTION: Thereby

TITLE OF INVENTION: Thereby

FILE REFERENCE: 21402-013 (Cura-313)

CURRENT APPLICATION NUMBER: USSN 60/208,427

PRIOR FILING DATE: 2001-09-20

PRIOR FILING DATE: 2000-05-30

NUMBER OF SEQ ID NOS: 2125

SEQ ID NO 1741

ENERGY: SEQ ID NO 1741

ENERGY: 1989

Sequence 1255, Application US/09764847

Patent No. US20020132767A1

GENERAL INFORMATION:

APPLICANT: ROSEN et al.

TITLE OF INVENTION: Nucleic Acids, Proteins, and Antibodies
FILE REFERENCE: PC009

CURRENT APPLICATION UNBER: US/09/764,847

CURRENT FILIG DATE: 2001-01-17

Prior application data removed - consult PALM or file wrapper SOFTWARE: Patentin Ver. 2.0

 /note="Site_1: Site_2: BamHI; cDNA library was foote="Site_1: SalI; Site_2: BamHI; cDNA library was prepared and sequenced in Mouse Genome Encyclopedia prepared and sequenced in Mouse Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues. 1st strand cDNA was prepared by using trehalose thermo-activated reverse transcriptase and subsequently enriched for full-length by cap-trapper. cDNA went through one round of normalization to Rot = 20.0 and subtraction to Rot = 459.0. Second strand cDNA was prepared with the primer adapter of sequence [5' Gagagagatartranscription to Rot = 459.0. Second 3']. cDNA was cleaved with XhoI and BamHI. Vector: a modified pBluescript KS(+) after bulk excision from Lambda etc."

/note="Voctor: PWD42nv; Purified genomic DNA from M.
musculus C57BL/GJ (female) was obtained from the Jackson
Laboratory Mouse DNA Resources/documents/dnares/). The DNA
was hydrodynamically sheared by repeated passage through a
0.05 inch orifice at constant velocity. The sheared DNA
was blunt end-repaired with T4 DNA polymerase and T4
polynucleotide kinase. Adaptor oligonucleotides were
ligated to the blunt ends in high molar excess. The
adaptored DNA was purified and size-selected for a 9.5 to
10.5 kb range using preparative agarses gel
electrophoresis. Vector DNA was prepared from a derivative
of pwD42 (gil4732114|gb|AF129072.1), a copy-number
inducible derivative of plasmid R1. The vector was ligated
with adaptors complementary to the insert adaptors and
purified. The sheared, adaptored mouse DNA was annealed to
adaptored vector DNA, and transformed into
chemically-competent E. coli XLIO-Gold (Stratagene) cells
and selected for ampicillin resistance."

 The invention relates to isolated lung tumour-specific proteins and their corresponding cDNA molecules. Lung tumour-specific proteins and their antigen-presenting cells are useful for stimulating and/or expanding T cells specific for a tumour protein, and for inhibiting useful for stimulating an immune response, and for treating cancer. The invention also relates to a composition lung tumour specific oligonalectide is useful in gene therapy and for diagnosis, detection and treatment of lung cancer. The present sequence is human T cell epitope related to lung tumour-specific protein.

Novel protein UL154 (AAW05523) is the product of an open reading frame found in a novel nucleic acid (AAT41419) isolated from the Towne strain of human cytomegalovirus (HCWV). UL154 and other novel proteins (see also AAW05521-22 and AAW05524) of the Towne strain, as well as novel and known proteins (see also AAW05524) of the Towne HCWV Toledo, can be produced in transformed host cells and used in the produc. of subunit vaccines against HCWV. They may be surface tropism, or may influence the immune response of an infected individual.
 New isolated human cytomegalovirus nucleic acid - from Towne and Toledo strains, used to develop prods. for the diagnosis, prevention and treatment of human CMV infections

measuring human gene expression in a sample derived from human heart (see ABA21535-ABA41305). The present sequence is a protein encoded by one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, diagnosing, grading, monitoring and prognosing diseases of the human heart and vascular system e.g. cardiovascular disease, hypertension, cardiac arrhythmias and congenital heart disease. Note: The sequence data for this parent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

 The present invention relates to single exon nucleic acid probes (SENP: see AAI31315-AAI57546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of

The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived from human lung comprising single exon nucleic acid probes having one of 12614 nucleic acid sequences mentioned in the specification, or their complements or the 12387 open reading frames derived from the 12614 probes. Also included are a microarray comprising the novel set of probes and incoarray comprising the novel set of probes which hybridise at high stringency to a nucleic acid expressed in the human lung; measuring gene expression in a sample derived from human lung, comprising (a) contacting the array with a collection of detectably labeled nucleic acids derived from human lung in a collection of detectably labeled nucleic acids derived from human lung a collection of detectably labeled nucleic acids derived from human lung a collection of detectably beduct to each probe of the array; identifying exons in a eukaryotic genome, comprising (a) algorithmically predicting at least one exon from genomic sequences of the eukaryote; and (b) detecting specific hybridisation of detectably labeled nucleic acids from eukaryote lung mRNA, to a single exon probe, having a fragment identical to the predicted exon, the probe is included in the above mentioned microarray; assigning exons from genomic sequence by the method above and (b) measuring the expression of each of the exons in the tissues and/or cell types indicates that the exons should be assigned to a single gene a peptide comprising one of 12011 sequences, mentioned in the specification, or encoded by the probes/open reading frames (ORF). The probes are used for gene expression analysis, and for the study of lung diseases combined human lung derived mRNA and for the study of lung diseases such as asthma, lung cancer, chronic obstructive pulmonary diseases such man lung derived mRNA and for the study of lung diseases. Hermannary disease, Hermannary is the interstitian lung disease (ILD), interstitian lung disease (ILD), ham

 The present invention relates to a method for generating a library of coligonucleotides of varying length and sequence in a desired orientation. The method comprises ligating a double-stranded oligonucleotide mixture having 5' and 3' ends compatible to each other and corresponding to cleavage products of different but compatible restriction enzymes, and cutting ligated oligonucleotide, such that only molecules that are ligated in undesired orientations are cut, to produce a sequence block. The present sequence is a fragment of human CD28 transmembrane region. The coding sequence for the present protein was used to generate a cloning cassette, which was used to clone the sequence blocks of the

 The present sequence represents a human CD28 extracellular spacer and transmembrane region. Secondary signalling sequences derived from CD28 can be linked to a non-natural stimulatory primary signalling motif to produce a cytoplasmic signalling sequence. The primary motif is efficient at mediating immune cell signal transduction, particularly when comporated in an intracellular signalling domain of a chimneric receptor. The primary signalling anctif can be combined in any way so as to achieve the desired level of activation (or inhibition) of a number of secondary messenger cascades. The signalling motifs are useful in therapy and in the manufacture of medicament for treating or preventing disease in humans or animals. They are are useful for treating human contrary infections, inflammatory/autoimmune diseases such as asthmace and eczema, congenital diseases e.g. cystic fibrosis, sickle cell anemia, and eczema, congenital diseases e.g. cystic fibrosis, sickle cell anemia, candibate sclerosis, transplant-related disease e.g. organ transplant rejection, graft versus host disease, metabolic/idiopathic disease

The invention relates to novel primary signalling motifs containing a consensus amino acid sequence. These motifs are extremely efficient at mediating immune cell signal transduction, particularly when incorporated into an intracellular signalling domain of a chimeric receptor. Nucleic acids that encode, and polypeptides that contain, these primary signalling motifs are useful in medicine and research. They are useful in therapy, or in the manufacture of a medicament for treating or preventing disease in humans or in animals. These diseases include infections (e.g. HIV (human immunodeficiency virus) infection), inflammatory or autoimmune diseases (e.g. asthma or eczema), congenital diseases (e.g. cystic fibrosis or sickle cell anaemia), dermatological diseases (e.g. psoriasis), neurological diseases (e.g. multiple sclenosis), organ transplant rejection or graft-versus-host disease, or metabolic/idiopathic diseases (e.g. diabetes or cancer). The present sequence is the human CD28 extracellular spacer and transmembrane region used in the construction of a cloning transmembrane region used in the construction of a cloning cassette for generating sequence blocks of primary and secondary signalling motifs are sequences that the property or an inhibitory signal, which regulates contains and the contains are sequences that the contains and the contains and the contain
 New nucleic acids encoding polypeptides with expanded primary signaling motifs, for use in gene therapy, particularly for treating or preventing infections, inflammations or autoimmune diseases in humans

The nucleotide sequence encoding the present protein was used in the construction of chimeric receptors with different binding, extracellular Spacer, transmembrane and signalling components. The properties and level of expression of a membrane-associated by caltered by substituting a transmembrane region or a membrane-anchoring region for transmembrane or membrane-anchoring regions that are not naturally part of the protein. The relative response of membrane-associated proteins to cell surface-associated antigen versus antigen in solution, and the sensitivity of intracellular signaling mediated by membrane-associated proteins can be altered. They can be important in treatment of, e.g. HIV infammatory/autoimmune disorders (e.g. rheumatoid arthritis, of inflammatory bowel disease), cancer, allergic/atopic diseases (e.g. asthma or eczema), congenital disorders (e.g. cystic fibrosis or sickle cell anneamia), dermatological disorders (e.g. fibrosis) proteins or particular garders (e.g. multiple sclerosis), organ transplant rejection, graft-versus-host diseases, or metabolic/idlopathic diseases (e.g. diabetes). The polynucleotide encoding the present confirmant of the miniman coll of the extracellular spacer confirmative and consists of the extracellular spacer confirmative.

02-AUG-2001
The invention relates to a nucleic acid (I) encoding a cytoplasmic signalling constraints at least two cytoplasmic signalling sequences where at least one cytoplasmic signalling sequence derived from comprises at extracellular isolatily. INFR).

CD137 (a member of the tumour necrosis receptor family, INFR).

Also included are a nucleic acid (II) encoding a chimaeric receptor from which comprises an extracellular ligand-binding domain, where the cytoplasmic signalling domain is encoded by nucleic acid (I), a vector comprising a nucleic acid (I) or (II), a host cell containing nucleic acid (I) or (II) or the vector, a peptide or polypeptide comprising a cytoplasmic signalling molecule encoded by nucleic acid (I) and a cytoplasmic signalling molecule encoded by nucleic acid (I) and a cytoplasmic signalling molecules encoded by nucleic acid (I) and a cytoplasmic signalling molecules encoded by nucleic acid (II). The novel cytoplasmic signalling molecules encoded by nucleic acid can be used cytoplasmic signalling molecules or, as a component part of a larger protein such as a chimaeric receptor. The cytoplasmic signalling molecules, chimaeric receptor protein. The cytoplasmic signalling molecules, chimaeric receptors and nucleic acids encoding them are preferably useful for treating human immunodeficiency virus (HIV) infection, inflammatory disease/autoimmune disease e.g. asthma, or eczema, congenital disease e.g. cystic fibrosis, or sickle cell anaemia, congenital disease e.g. cystic fibrosis, or sickle cell anaemia, congenital disease e.g. cystic fibrosis, or sickle cell anaemia, conference in disease e.g. cystic fibrosis, or sickle cell anaemia, congenting or disease, metabolic/idiopathic disease, c.g. or cancer. The present sequence represents a chimaeric receptor containing a transmembrane domain. This region is used in the chimaeric receptor constructs of the invention.

The present invention provides the protein and coding sequences of a number of human digestive system antigens. These can be used in the diagnosis, treatment and prevention of digestive system disorders, including cancer, Meckel's diverticulum, bacterial or parasitic infections, appendicitis, Hirschsprung's disease, chronic colitis or ulcerative, colitis. The present sequence is a digestive system antigen of

Rosen CA, Barash SC, Ruben SM;

WPI; 2001-457728/49. N-PSDB; AAS31745.

Isolated nucleic acid molecule encoding a human liver related protein is used in preventing, treating or ameliorating disorders of the liver particularly cancer of the liver -

Claim 11; SEQ ID No 221; 526pp; English.

Sequences AAU19970-AAU20115 represent the liver associated polypeptides of the invention. Liver associated polypeptides and their associated polynucleotides are useful in the diagnosis, treatment and prevention of various types of disorders in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. A pathological condition can be determined by detecting the presence or absence of a mutation in a liver associated polynucleotide. The treatable disorders include autoimmune diseases such as rheumatoid arthritis, hyperpoliferative disorders such as neoplasms of the breast or liver, cardiovascular disorders such as cardiac arrest, errebrovascular disorders such as cardiac arrest, cerebrovascular disorders such as cardiac arrest, disorders such as Alzheimer's disease, infections caused by bacteria, viruses and fungi, ocular disorders such as corneal infection, endocrine

```
disorders such as premature labour and infertility, gastrointestinal disorders such as Crohn's disease, renal disorders such as glomerulonephritis and respiratory disorders such as asthma and pleurisy. The polypeptides can also be used to aid wound healing, to prevent skin aging due to sunburn, to maintain organs before transplantation, to regenerate tissues and in chemotaxis.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fite.

The invention relates to 145 novel human liver antigens (ABP40831-C ABP40975) and to CDNAs encoding them (ABN90036-ABN90180), and also ce encompasses polypeptides 90% identical and polynucleotides 95% identical recombinant vectors and host cells comprising human liver antigen computed by the invention. The invention additionally relates to polynucleotides, antibodies against human liver antigen antigen polynucleotides and polypeptides in diagnosing, reating, comprising or preventing various disorders of the liver. Such conditions include viral infections (e.g., cytomegalovirus, Epstein-Barr virus, infections (e.g., cytomegalovirus, Epstein-Barr virus, infections (e.g., cytomegalovirus, Epstein-Barr virus, infections (e.g., cytomegalovirus, Epstein-Barr virus, infections (e.g., cytomegalovirus, Epstein-Barr virus, infections (e.g., clonorchis sinensis, Echinococcus granulosus and disorders that may be treated include inflammatory conditions (e.g., autoimmune diseases (e.g., virus, hepatitis), damage caused by drugs or toxins, compounds which modulate liver antigen expression or activity. The peptic ulcers, gastritis and peritoneal diseases, throat antigen compounds which modulate liver antigen expression or activity. The compounds which modulate liver antigen expression or activity. The compounds which modulate liver antigen expression or activity. The mapping, in the identification of individuals and in forensic analysis, compaping in the polypeptides may be used as molecular weight markers or to henner may never to compound an expression or activity and compaping and disease antibodies useful in disease diagnosis, drug targeting and company the never to compound the person of the person of the person of the person of the person of the person of the person of the person of the person of the person of the person of the person of the person of the person of the person of the person of the person of the person of the person of the person of the person of the person of the person of the person of the person of the prepare antibodies useful in disease diagnosis, drug targeting and phenotyping. The present sequence represents a human liver antigen of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the USPIO at seqdata.uspto.gov/sequence/

 Gaps
 Regulation of apoptosis can be used in the treatment of cancer, autoimmune disease and viral disease (e.g. HIV virus infections), also to prolong survival of e.g. hybridoma cells in culture resulting in an increase in bioproduct yield. This protein may also be used in a method for diagnosing diseases associated with increased or decreased levels of Fas-associated protein.
 New Fas associated proteins PTP-BAS types 4 and 5 - involved in programmed cell death, used for modulating apoptosis, e.g. for treating cancer, and for identifying other modulators

 Human; 5' EST; expressed sequence tag; secreted protein; cDNA isolation; gene therapy; chromosome mapping.
 The present sequence is a polypeptide encoded by one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. The 5' ESTs different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained isolating cloyed primed cloyAl libraries. Such ESTs are not well suited for isolating clohA sequences derived from the 5' ends of mRNAs and even in UTR is rarely included. 5' ESTs are derived from the been obtained, the full 5' ends and can therefore be used to obtain full length cDNAs and genomic Chromosome mapping procedures. They are used to obtain all length cDNAs and genomic chromosome mapping procedures. They are used to obtain pestream requilatory sequences and to design expression and secretion vectors.
 Staphylococcus epidermidis; open reading frame; ORF; bacterial infection;
 New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for diagnostic, forensic, gene therapy and chromosome mapping procedures

ABN90538 to ABN93374 represent Staphylococcus epidermidis open reading frame (ORF) nucleic acid sequences which encode the amino acid sequences given in ABP53124 to ABP37960. The S. epidermidis sequences have antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagonsis and treatment of bacterial infections, particularly S. epidermidis infections. The sequences can be used to compounds able to interfere with the S. epidermidis life cycle or inhibit S. epidermidis infection.

W.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the
 Novel isolated nucleic acid encoding a Staphylococcus epidermidis polypeptide, useful for diagnosing and treating bacterial infections -

The present sequence represents a Staphylococcus aureus protein, that, based on homology with an Escherichia coli protein, is believed to be a large conductance mechanosensitive channel. The DNA sequence was isolated from a library of clones of S. aureus WCUH 29 in Escherichia coli. The From a library of clones of S. aureus WCUH 29 in Escherichia coli. The DNA sequence can be used in the construction of ribozymes and antisense basedences to control the expression of Staphylococcal genes. The DNA sequence is also useful as a source of regulatory elements for the control of bacterial gene expression. The present protein may be used control of bacterial action. These vaccines and antibodies would protect a host against invasion by S. aureus, and conditions relating to Staphylococcal infection, e.g. Staphylococcal food poisoning, scaled skin syndrome, and toxic shock syndrome.

 This invention describes novel polypeptide fragment sequences (I) and their encoding nucleic acids (II) which are highly expressed in normal bladder tissue and have cytostatic activity. (II) are used for recombinant expression of (I) and to isolate complete genes. (I) are used to identify agents suitable for the treatment of bladder tumours, to directly treat this form of cancer (including expression from gene theretay vectors), or are used in a preparation for cancer treatment. (I) is also used for the generation of specific antibodies. (II) are identified by assembling ESTS (expressed sequence tags) from a identified by assembling ESTS (expressed sequence tags) from a particular tissue type before comparison of expression patterns. This particular tissue type before comparison of expression patterns. This illows a significantly longer fragment of the gene to be revealed, and therefore reduces the number of failures because of ESTS from different libraries representing different parts of the same unknown gene (Internation represent parts of the same unknown gene (Internation represent protein fragments encoded by the human normal expression contains the part of the gene coded by the human normal expression coded tissue.

mutacin I operon comprises eight genes in the order of MutR, MutA, mutacin I operon comprises eight genes in the order of MutR, MutA, MutB, MutC, MutD, MutP and MutT. MutR is the positive crequiator for expression of the operon. MutA is believed to be the structural gene encoding prepromutacin. MutB, MutC and MutD possibly constitute the modification apparatus for prepromutacin I, and MutP and constitute the protease and ABC transporter, respectively, for transportation and processing of premutacin I. MutA is a lantibiotic, transportation and processing of premutacin I. MutA is a lantibiotic, which is isolated from Streptococcus mutans CH43. The MutA protein has wolecular weight of approximately 2364 Da. MutA nucleic acid a molecular weight of approximately 2364 Da. MutA nucleic acid conference in situ to protect subjects and for producing the lantibiotic, mutacin I, in situ to protect subjects against pathogens or other undesirable organisms. The mutA nucleic acid and its encoded protein are particularly useful for as antimicrobial agents against, e.g. antibiotic resistant microorganisms. These are especially useful for treating multiple drug resistant bacteria such as certain strains of staphylococcus aureus, which are known to be multiple drug resistant.

The present invention relates to the genome sequence of Listeria monocytogenes EGD-e (see ABA03041). The genome sequence and fragments of monocytogenes EGD-e (see ABA03041). The genome sequence and fragments of it are useful for selecting probes and primers for detecting genes in L. CCC monocytogenes and related organisms, and for studying genetic polymorphisms and other genome. The present sequence is a protein polymorphisms and other genome sequence of the present invention. Proteins carpessed from the genome sequence are useful for raising specific artipodies, identification of L. monocytogenes and related organisms, and antibodies, identification of L. monocytogenes and related organisms, and for biosynthesis and blodegradation, especially blosynthesis of Vitamin corp. Selecting compounds that regulate gene expression and cell replication selecting compositions for the treatment or prevention of infections by L. vaccines compositions for the treatment or prevention of infections by L. monocytogenes and related organisms.

The HTLV-III DNA segment of clone 121 was excised from pWR100 and sequenced (AAN60081). Based upon the DNA sequence, the putative AA sequence of the HTLV-III polypeptide could be assigned (AAP60067). In expression the HTLV-III polypeptide in E.coli the HTLV-III segment of clone 121 was cloned into a high expression vector. E.coli transformed with the recombinant vector expressed a 15 Kd fusion protein with short fusion partners at both ends (41 AAs of E.coli, the 83 AA residues encoding by HTLV-III polypeptide and (AAP60068).

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

-I-FUNCTION: CYTOCHROME C OXIDASE IS THE COMPONENT OF THE RESPIRATORY CHAIN THAT CATALIXZES THE REDUCTION OF OXYGEN TO WATER. SUBUNITS 1-3 FORM THE FUNCTIONAL CORE OF THE ENZYME COMPLEX. CO I IS THE CATALIXTIC SUBUNIT OF THE ENZYME. ELECTRONS ORIGINATING IN CYTOCHROME C ARE TRANSFERRED VIA THE COPPER A CENTER OF SUBUNIT 2 AND HEME A OF SUBUNIT 1 TO THE BIMETALLIC CENTER FORMED BY HEME AS AND COPPER B (BY SIMILARITY).

-I-CAPALITIC ACTIVITY: 4 FERROCYTOCHROME C + O(2) = 4 FERRICYTOCHROME
 -1- COFACTOR: HEMES A, A3, AND COPPER B (BY SIMILARITY).
-1- PATHWAY: TERMINAL STEP IN THE RESPIRATORY CHAIN.
-1- SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN. MITOCHONDRIAL INNER MEMBRANE (BY SIMILARITY).
-1- SIMILARITY: BELONGS TO THE HEME-COPPER RESPIRATORY OXIDASE FAMILY.

MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. John D.
Mapping information for denetics, Washington University, St. Louis
McPherson, Department of Genetics, Washington University, St. Louis
McD. For additional information about the map position of this
sequence, see http://genome.wustl.edu/gsc
 Submitted (04-007-2001) Genome Sequencing Center, Washington University School of Medicine, 4444 Forest Park Parkway, St. Louis,
 63108, USA
 NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
 all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30; an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
 The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Frengen, E. Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An Improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at http://www.chori.org
 NEIGHBORING SEQUENCE INFORMATION:
The clone sequenced to the right is RP11-310A13. Actual start of
this clone is at base position 1 of RP11-733C7; actual end is at
base position 161280 of RP11-733C7.
 The sequence of AC055827 has been incorporated into AC093903.
 This sequence was finished as follows unless otherwise noted:
 Data from AC009792 was used to finish the clone, AC055827.
 Submitted (01-MAR-2002) Department of Genetics, Washington University, 4444 Forest Park Avenue, St. Louis, Missouri 65 On Oct 4, 2001 this sequence version replaced g1:15625016.

Coding seqences below are the result of integration and manual review of the following data: computer analysis using the program Genefinder (P. Green and L. Hillier, personal communication), the large scale EST projects of Yuji Kohara (http://www.ddb).nig.ac.ip/C-elegans/html/CE_INDEX.html) and The C. similarity to other proteins from BlastX analyses (http://wast.wustl.edu/), sequence conservation with C. briggsee 10:115-1125, 2000), individual C. elegans Genbank submissions, and personal communications with C. elegans Genbank submissions, are predicted using the program tRNAscan-SE (Lowe, T.M. and Location/Quallifiers
 This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from

Submitted (19-APR-2002) Department of Genetics, Washington
University, Genome Sequencing Center, 4444 Forest Park Avenue, St.
Louis, Mo 63110, USA
On Aug 9, 2001 this sequence version replaced g1:2105482.
Submitted by:
 NOTICE: This sequence may not be the entire insert of this clone. It may be shorter because we only sequence overlapping sections once, or longer because we provide a small overlap between neighboring submissions.
 The 5' cosmid is C53H9, 3300 bp overlap; the 3' cosmid is Y71G12A, 3500 bp overlap. Actual start of this cosmid is at base position 3297 of M01D7; actual end is at 41179 of M01D7.
 For a graphical representation of this cosmid sequence and its

On Mar 1, 1999 this sequence version replaced gi:4263453.

* NOTE: This is a 'working draft' sequence. It currently

* consists of 12 contigs. The true order of the pleces

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence

* as soon as it is available and the accession number will

* be preserved.

 sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that the record is updated, the accession number will

Contact: Arnold Kas (akas (akas)) Sequence Validation:

This sequence has been validated by Multiple Complete Digest fingerprinting. Comparison of the experimentally derived digest fragments with sequence-predicted fragmentally derived digest fragments below a variable cutoff (approximately 400-600 bp) are not resolved in the fingerprint and hence do not appear in the table. There are no significant remaining discrepancies between the experimental and predicted values. Uniquely ordered fragments are separated by dashed lines.

The clone sequenced to the left is RPS-953F6. Actual start of this clone is at base position 1 of RPS-1164K10; actual end is at 149765 of RPS-1164K10.
 MAPPING INFORMATION:

The sequence of this clone was established as part of a mapping and sequencing collaboration between the NHGRI Chromosome 7 Mapping sequencing collaboration between the NHGRI Chromosome 7 Mapping project (Exic D. Green, Director), John D. McPherson in the Department of Genetics (Washington University), and the Washington University Genome Sequencing Center. For additional information about the map position of this sequence, see http://www.nhgri.nih.gov/DIR/GTB/CHR7, send mailto:egreen@nhgri.nih.gov or see http://genome.wustl.edu/gsc
 Submitted (30-JUL-1998) Department of Genetics, Washington
University, 4444 Forest Park Avenue, St. Louis, Missouri 63108, USA
4 (bases 1 to 149765)
 Direct Submission
Submitted (21-DEC-1999) Department of Genetics, Washington
University, 4444 Forest Park Avenue, St. Louis, Missouri 63108, USA
On Jul 30, 1998 this sequence version replaced g1:3213013.
 Direct Submission
Submitted (12-JUN-1998) Genome Sequencing Center, Washington
University School of Medicine, 4444 Forest Park Parkway, St. Louis,
MO 63108, USA
 This sequence was finished as follows unless otherwise noted: all regions were double stranded or sequenced with an alternate chemistry; an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.
 NOTICE: This sequence may not represent the entire insert of this
 This clone was desirved from human PAC library RPCI-5, prepared by Pieter de Jong and coworkers at Roswell Park Cancer Institute, using the method described by Ioannou et al., Nature Genetics 6:84-9 (1994). The library is from one male donor. For further details, see http://bacpac.med.buffalo.edu/
 clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
 Center: Washington University Genome Sequencing Center
 The clone is available from Genome Systems, Inc.

 Fragments of chemically modified genes associated with tumour suppressor genes and oncogenes, useful in designing primers and probes for analysing diseases associated with cytosine methylation state e.g.
 The invention relates to isolated lung tumour-specific proteins and their corresponding cDNA molecules. Lung tumour-specific proteins and their antigen-presenting cells are useful for stimulating and/or expanding relis specific for a tumour protein, and for inhibiting the development of cancer. The invention also relates to a composition useful for stimulating an immune response, and for treating cancer. The lung tumour specific oligonucleotide is useful in gene therapy and for diagnosis, detection and treatment of lung cancer. The present sequence is a cDNA encoding human lung tumour-specific protein.

The invention relates to a nucleic acid comprising a sequence of 18 bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with concogenes having a sequence taken from 58 (actually 533 since oncogenes having a sequence taken from 58 (actually 533 since oncogenes having a sequence taken from 58 (actually 533 since oncogenes having a sequences complementary to (58). The nucleic acid may be a peptide nucleic acid-oligomer (PNA) of at least 9 nucleotides and may for form part of a set of probes for detecting the cytosine methylation state and part of a set of probes for detecting the cytosine methylation state and cancers and tumours. The probes can also be used in a method for ascertaining genetic and/or epigenetic parameters for the diagnosis and/or therapy of existing diseases or the predisposition to specific diseases, by analysing cytosine methylations. The parameters may be compared to another set of genetic and/or prognosis events which are disadvantageous to patients. The present sequence is one of the concess are desired from tumour suppressor genes and
 Drosophila melanogaster expressed polynucleotide SEQ ID NO 21698.

New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
 interactions
```

Claim 1; SEQ ID NO 21698; 21pp + Sequence Listing; English.

is The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and insecticides, therapeutics and pharmaceutical drugs. The invention sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins

(ABB57737-ABB72072).
The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published\_pct\_sequences.

Novel nucleic acid useful for diagnosis and therapy of diseases associated with development genes such as diabetes, comprises a sequence of a segment of chemically pretreated DNA of genes associated with development

Glaim 1; SEQ ID NO 324; 27pp; English.

```
The invention relates to a nucleic acid (I) comprising a sequence at least 18 bases in length of a segment of chemically pretreated DNA (II) of genes associated with development selected from 87 genes listed in sequences (ABN79984-ABN80333) or their complements. The invention is sequences (ABN79984-ABN80333) or their complements. The invention is useful for the diapprosis or therapy of diseases associated with concern apoptosis related to homeobox containing genes (HOX), like diabbets, cancer, apoptosis related to homeobox containing associated with congenital heart disease, epilepsy, diseases, syndromes of mistone deacetylation, Currarino syndrome, diseases related to development of the brain and limb girdle muscular dystrophy and dwarfism. In their complementary sequences as primer oligonucleotides for the amplification of the 350 sequences, as primer oligonucleotides for the amplification of the 350 sequences, (II) and/or their complements and single nucleotides polymorphisms (SNPs).

CNOTE: The sequence data for this patent did not form part of the printed the number of the printed specification but is based on sequence information supplied to Derwent by

The invention relates to 224 nucleic acid sequences comprising at least consists of a chemically pretreated gene associated with gene regulation aslected from 43 known genes (or complementary sequences). The chemical pretreatment converts cytosine bases unmethylated at the complementary converts cytosine bases unmethylated at the consistion to uracil or another base with hybridisation behaviour dissimilar to cytosine, to enable analysis of cytosine methylations. The DNA sequences, oliqomers (or sets/darays) and method are useful in the diagnosis of diseases (or predisposition to diseases) or associated with gene regulation and in therapy of such diseases, by enabling analysis of the cytosine methylation patterns of such genes, cat be provided. They are especially useful in diagnosis and therapy of e.g. severe combined immunodeficiency disease, cardiac disorders, haemophilia, solid tumours and cancer, Warner syndrome, casthma, HDR syndrome, Saethre-Chotzen syndrome, renal disease, cardiac disorder with the human gene regulation associated with the human gene regulation sociated with the human gene regulation associated genes.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymerase and T4 polymerase and T4 polymerleotide kinase. Adaptor oligomocleotides were adaptored to the blunt ends in high molar excess. The 10.5 Kb range using preparative agarces gel electrophoresis. Vector DNA was prepared from a derivative of pWMA2 (gi|4732114|gb|AR129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and adaptored vector DNA, and transformed into chemically.competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance. was used as a driver in a hybridization with a pool of the NIH_BMAP_M_S3.3, NIH_BMAP_M_S3.2, and NIH_BMAP_M_S3.1 libraries in the form of single-stranded circles. The remaining single-stranded circles (subtracted library) was purified by hydroxyapatite column chromatography, converted to double-stranded circles and electroporated into DH10B bacteria (LifeTechnologies) to generate the NIH_BMAP_M_S4 library. This procedure has been previously described (Bonaldo, Lennon and Soares, Genome Research 6:791-1806, 1996)

 The sequence contained an oligo-dr track that was present in the oligonucleotide that was used to prime the synthesis of first strand colouncleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NotI site and the oligo-dr track served to identify it as a clone from the retina tissue cDNA Library Preparation: M.B. Soares Lab Clone GENETICS. It should be noted that Bento Soares is generating a small number of additional specialized non-redundant arrays of BNAP cDNAs whose availability will be considered under appropriate and limited collaborative arrangements The tissue for this library was sequence: M13 Forward

 470 bp mRNA linear EST 26-JUN-2000 ug70c08.71 Soares_mammary_gland_NMLMG Mus musculus cDNA clone IMAGE:1547726 5' similar to gb:X65627 M.musculus mRNA TNZ2 for p68 BE200533
 Chote-"Vector: pT7T3D-Pac (Pharmacia) with a modified polyliker; 1st strand cDNA was prepared from mammary gland tissue from a lactating female, and was then primed with a Not I - oligo(dT) primer. Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT7T3 vector. Library is normalized. Library was constructed by Bento Soares and M. Fatima Bonaldo. " 88 c 98 g 170 t

 The invention relates to isolated lung tumour-specific proteins and their corresponding cDNA molecules. Lung tumour-specific proteins and their antigen-presenting cells are useful for stimulating and/or stpanding T cells specific for a tumour protein, and for inhibiting the development of cancer. The invention also relates to a composition useful for stimulating an immune response, and for treating cancer. The lung tumour specific oligonucleotide is useful in gene therapy and for dagnosis, detection and treatment of lung cancer. The present sequence is human T cell epitope related to lung tumour-specific protein.

The invention relates to isolated polynuclectide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, and gene mapping, and in recombinant production of (II). The polynuclectides are also used in diagnostics as expressed sequence tags (I) relatifying expressed gene in the combinant production of (II). The polynuclectides are also used in diagnostics as expressed sequence tags (II) is useful in gene therapy techniques (II) is useful for generating antibodies against it, detecting or maging of sites expressing (II) or to treat disease states involving a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical disorders involving aberrant protein expression or biological activity. Crep polypeptide and polynuclectide sequences have applications in responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and diagnostic amino acid sequences of the invention.

CC main or acid sequences of the invention.

CC main or or data for this parent did not appear in the printed or specification, but was obtained in electronic format directly from WIPO very

 The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AAO00010-AAO13910) that exhibit activity elating to the encoded proteins (AAO00010-AAO13910) that exhibit activity elating to cytokine, cell prolliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides neve various cytokine-like activities, peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, hemmatopolesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation.

The invention relates to novel human secreted polypeptides. The colypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for with altered levels of polypeptide. The polypeptides are also useful for identifying a properties are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptides and cells genetically the proteins are useful in polypeptides and cells genetically considered to express them are also useful for producing the proteins. The proteins are useful in genetic vaccination, testing and increase stem cell proliferation; to regulate haematopoiesis; and in mimus suppression and/or stimulation; as anti-inflammatory agents; and consimulate suppression and/or stimulation; as anti-inflammatory agents; and sequences of novel human secreted proteins of the invention.

 The present invention describes human DNA mismatch repair protein 15 (I). (I) has cytostatic, virucidal, immunomodulatory, antiinflammatory, hadmostatic and anti-HIV activities. The polynucleotide (II) encoding the be used in gene therapy. (I) and (II) an be used in the diagnosis and treatment of malignant tumour, haemopathy, human immunodeficiency virus (HIV) infection, immunological diseases and warious inflammations. The present sequence represents the human DNA mismatch repair protein 15 N-terminal peptide, which is used in an example from the present invention.
 This is the amino acid sequence of the human epithelial peptide, used in the method of the invention as early markers for cancer. Probes and primers that hybridise to or amplify these peptides are used to diagnose precancerous states, e.g. of lung, liver, kidney, breast, prostate, head or neck, melanoma or myeloma, or to determine

The present invention relates to the isolation of novel human colon associated polypeptides, and the CDNA (AAS39348-AAS39581) and genomic conformation and genomic sequences encoding for them. The sequences of the invention are useful cof the diagnosis, treatment, prevention and/or prognosis of disorders of the colon including colon cancer, congenital abnormalities inflammatory bowel disease (IBD), neoplastic cell disorders (e.g. polyps and adenomas, intestinal inflammatory disorders, colonic inflammation, diarrhoea and dysentery, malabsorption syndromes (e.g. lactose intolerance), intestinal inflammatory disorders, colonic inflammation, diarrhoea and dysentery, malabsorption syndromes (e.g. lactose intolerance), intestinal inflammatory disorders, colonic colonic sequences of the invention can also be used in gene polypucleotides sequence of the invention can also be used in gene colonic the sequence data for this patent did not form part of the printed conspecification, but was obtained in electronic format directly from WIPO
 Human, digestive system antigen, gene therapy; cancer; appendicitis;
ulcerative colitis; infection; Hirschsprung's disease; chronic colitis;
digestive system disorder; Meckel's diverticulum.
 Isolated polypeptide for treating, preventing and/ or prognosing disorders related to the colon including colon cancers and also for testing and detection e.g. diagnosis

number of human digestive system antigens. These can be used in the diagnosis, treatment and prevention of digestive system disorders, including cancer, Meckel's diverticulum, bacterial or parastic infections, appendicitis, Hirschsprung's disease, chronic colitis or the present sequence is a digestive system antigen of
 Human; cytokine; cell proliferation; cell differentiation; gene therapy; vaccine; peptide therapy; stem cell growth factor; haematopoiesis; tissue growth factor; immunomodulatory; cancer; leukaemia; nervous system disorders; arthritis; inflammation.
 The invention relates to human polynucleotides (AAI79941-AAI93841) and cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or e.g. stem cell growth factor activity, hemantopolesis regulating activity, accines or e.g. tissue growth factor activity, hemantopolesis regulating activity, itssue growth factor activity, immunomodulatory activity activity activity in the diagnosis and/or treatment.
 Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at.ftp.wipo.int/pub/published_pct_sequences.

Sequences AAU21852-AAU22466 represent the cardiovascular system antigen cassociated polyneclectides are useful in the diagnosis, treatment and cassociated polynuclectides are useful in the diagnosis, treatment and cassociated polynuclectides are useful in the diagnosis, treatment and goats, horses, cats, dogs, chickens or sheep. A pathological condition can be determined by detecting the presence or absence of a mutation in a include autoimmune diseases such as rheumatoid arthritis, cardiovascular system antigen polynuclectide. The treatable disorders in hyperproliferative disorders such as neoplasms of the breast or liver, disorders such as cardiac arrest, cerebrovascular cardiovascular disorders such as cardiac arrest, cerebrovascular as corneal infections caused by bacteria, viruses and fungt, premature labour and infertility, gastrointestinal disorders such as corneal infection, endocrine disorders such as creation, so disease, renal disorders such as stabma and pleurisy. The polypeptides can conference of also be used to aid wound healing, to prevent skin aging due to sunburn, chamatanic
 Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

 Human; 5' EST; expressed sequence tag; secreted protein; cDNA isolation; gene therapy; chromosome mapping.
 The present sequence is a polypeptide encoded by one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. The 5' ESTs were prepared from total human RNAs or poly4+ RNAs derivved from 30 different tissues. ESTs sequences usually correspond mainly to the 3' duntranslated region (UTR) of the mRNA because they are often obtained from oilso-dr primed cDNA libraries. Such ESTs are not well suited for those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' UTR is rarely proceed in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors.
 New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for diagnostic, forensic, gene therapy and chromosome mapping procedures

The present sequence is a polypeptide encoded by one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. The 5' ESTs of 5' ESTs derived from 130 core prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' different tissues. EST sequences usually correspond mainly to the 3' contranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed CDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from RNAs with intact 5' conds and can therefore be used to obtain full length cDNAs and genomic current and some mapping procedures. They are used to obtain full length cDNAs and genomic chromosome mapping procedures. They are used to obtain upstream

C regulatory sequences and to design expression and secretion vectors.

 The invention relates to novel genes (AAL34669-AAL37666) and proteins (ABB03087-ABB04109) associated with the musculoskeletal system useful for preventing, treating or ameliorating medical conditions e.g. by corpus or gene therapy. The genes are isolated from a range of human protein or gene therapy. The genes are isolated from a range of human corpus disclosed in the specification. The nucleic acids proteins, tissues disclosed in the specification. The nucleic acids proteins, contained and prevention of: (a) cancer, e.g. breast and ovarian cancer and and prevention of: (a) cancer, e.g. breast and ovarian cancer and coher cancers of the adrenal gland, bone, bone marrow, breast, other cancers of the adrenal gland, bone, bone marrow, breast, contaction of alsorders e.g. Addison's disease, allergies, autoimmune haemolytic disorders e.g. anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, and ultiple sclerosis, rheumatoid arthritis and ulcerative colitis; multiple sclerosis, rheumatoid authritis and ulcerative colitis; contained disorders such as myccardial ischaemias; (d) wound (c) cardiovascular disorders such as wiral, bacterial, fungal and contained and (f) infectious diseases such as viral, bacterial, fungal and
 parasitic infections.
Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

 The invention relates to isolated polynucleotide (I) and probes, polypeptide (II) sequences. (I) is useful as hybridisation probes, colymerase chain reaction (PCR) primers, oligomers, and for chromosome polymerase chain reaction (PCR) primers, oligomers, and for chromosome colymerase chain reaction (PCR) primers, oligomers, and for chromosome con demanding an economiant production of (II). The colymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques contrating a polypeptide in tissue, as molecular weight markers and as quantitating a polypeptide in tissue, as molecular weight markers and as constituted of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful in makers and collisorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in compactics, for genetic disorders or other traits to assess biodiversity responsible for genetic disorders or other traits to assess biodiversity amino acid sequences. Abg00010-Abg30377 represent novel human conditions and product expression which invention in the printed mathematic mino acid sequences of the invention.

The invention relates to 2175 novel human ovarian antigens (ABP41054-canopasses polypeptides 90% identical and polynucleotides 95% identical concensasses polypeptides 90% identical and polynucleotides 95% identical concensasses polypeptides 90% identical and polynucleotides 95% identical recombinant vectors and host cells comprising human ovarian antigen of varian antigen of ovarian antigen of ovarian antigens, and the use creating, proposing or preventing various ovary and/or breast-related disorders. Such conditions include ovarian cancer and breast cancer, and polycystic ovary syndrome, ovarian or least cancer, and polycystic ovary syndrome, ovarian or least origin, reproductive system polycystic ovary syndrome, ovarian oysts, and dysmenorrhoea), endocrine oblycystic ovary syndrome, ovarian oysts, and dysmenorrhoea, endocrine or shock syndrome, inflammatory conditions (e.g., champydia, HuV, toxoplasmosis, and toxic ovaquintis), immune disorders (e.g., champydia, HuV, toxoplasmosis, and toxic or shock syndrome, ovarian or system of sorders (e.g., champydia, HuV, toxoplasmosis, and toxic or propriated disorders, autoimmune oophoritis, systemic lugus exythematosus), inflammatory conditions (e.g., mastitis, cophoritis, and thinary system disorders, e.g., champydia, HuV, toxoplasmosis, and toxic cand utinary system disorders, ovarian antigen polypeptides and conditions (e.g., anaemia) cardiovascular disorders, polynucleotides may also be used in screening for compounds which identification of individuals and in forensk analysis, and the most of further be used for gene therapy, chromosome mapping, in the identification of individuals of a trips of prepare antibodies sequence represents a human ovarian antigen of the invention.

Constituted to the proper of the invention of the invention, the specification, but was obtained in electronic format directly from Wipo
 Isolated nucleic acid molecules encoding novel ovarian polypeptides, useful in the prevention, treatment and diagnosis of cancer (e.g. ovarian cancer), immune disorders, cardiovascular disorders and

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, complymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The complex complex complex consists of (II) as expressed sequence tags to restore normal activity of (II) or to treat disease states become complex control of (II) as useful in gene therapy techniques (II). (II) is useful for generating antibodies against it, detecting or guantitating a polypeptide in tissue, as molecular weight markers and as imaging of sites expressing (II). (I) and (II) are useful in medical confiscence involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and diagnostic amino acid sequences of the invention.

Complex configuration of mutations and configuration of mutations and configuration acid sequences of the invention.

Complex configuration of sequences of the invention.

Complex configuration of sequences of the invention.

Complex configuration of mutations and products dependent on DNA and configuration, but was obtained in electronic format directly from WIPO

 EMBO J. 13:898-905(1994).

-1-FUNCTION: CYTOCHROME C OXIDASE IS THE COMPONENT OF THE RESPIRATORY CHAIN THAT CATALYZES THE REDOCTION OF OXYGEN TO WATER. SUBBUILTS 1-3 FORM THE FUNCTIONAL CORE OF THE ENZYME COMPLEX. CO I IS THE CATALYTIC SUBUNIT OF THE ENZYME. ELECTRONS ORIGINATING IN CYTOCHROME C ARE TRANSFERRED VIA THE COPPER A CENTER OF SUBUNIT 2 AND HEME A OF SUBUNIT 1 TO THE BIMETALLIC CENTER FORMED BY HEME AND COPPER B (BY SIMILARITY).

-1-CATALYTIC ACTIVITY: 4 FERROCYTOCHROME C + O(2) = 4 FERRICYTOCHROME
 C + 2 H(2)0.
-1- COFACTOR: HEMSE A, A3, AND COPPER B (BY SIMILARITY).
-1- PATHWAY: TERMINAL STEP IN THE RESPIRATORY CHAIN.
-1- SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN. MITOCHONDRIAL INDER MEMBRANE (BY SIMILARITY).
-1- SIMILARITY: BELONGS TO THE HEME-COPPER RESPIRATORY OXIDASE FAMILY.
